AB - J58152037 The fireproof packing compsn. (I) for carpeting is made by adding 2-35 pts. wt. fire-retarding plasticiser (II) to 100 pts. wt. of a compsn. consisting of 95-40 pts. wt. of an emulsion of vinyl chloride-ethylene (III) or vinyl chloride-vinyl acetate-ethylene copolymer (IV) or their modified material (V) and 5-60 pts. wt. synthetic rubber latex (VI). In (III) and (IV), the wt. ratio of vinyl chloride to ethylene to vinyl acetate is 30-95:5-70:55-0. (I) is elastic and has excellent flame-retarding and reinforcing effects. It can be used for carpets e.g. for houses, vehicles and airplanes.

- Fibrous materials in the carpeting include wool, rayon, polyacrylonitrile, polyamide, polyester, polypropylene and nylon. (V) is (III) or (IV) modified e.g. by acrylamide, methacrylamide, N-methylolacrylamide or acrylic acid. (VI) may use a butadiene copolymer such as styrene-butadiene, acrylonitrile-butadiene or methyl methacrylate-butadiene. (II) is e.g. tricresyl phosphate, triallyl phosphate, cresylphenyl phosphate, xylenylidiphenyl phosphate or trixylenyl phosphate.(0/0)
